Guidelines

- Kindly use the given template for submitting your project (Make a copy of the template)
- One team is only required to submit one project/ppt.
- The ideal size of the presentation should not be more than 10 slides.
- You are welcome to add as many POCs and design concepts to support your project.
- The project should be feasible and the team members should be capable enough, to come up with the prototype of the same idea, if required.
- ***Solutions must include at least one Google technology.***

Brief about your solution and problem statement addressing

Problem Statement

Lost items in campuses and public spaces often remain unrecovered due to lack of a centralized and intelligent system.
Existing methods rely on manual searching and keyword-based matching, which is inefficient and unreliable.

Proposed Solution

A **Lost & Found prototype** that allows users to report lost or found items with descriptions and images.
Uses **AI-driven text interpretation** to calculate a **match probability percentage**, helping users identify possible matches with confidence.

Opportunities

a. How different is it from any of the other existing ideas?
b. How will it be able to solve the problem?

How is it different from existing ideas?

Uses AI-based semantic understanding instead of basic keyword matching.
Displays a match probability percentage to build user trust.
Focuses on visual clarity by sharing and enlarging item images.

How does it solve the problem?

Automates matching between lost and found reports.
Improves visibility and verification through image sharing.
Reduces time and effort required to recover items.

List of features offered by the solution

1. Lost or Found item reporting
2. Text-based item description with AI interpretation
3. Image upload for better identification
4. AI-generated match probability percentage
5. Image sharing between matched users
6. Image enlarge feature for better visibility
7. Simple and intuitive user interface

Google Technologies used in the solution

Gemini AI

- Interprets and compares textual descriptions
- Generates match probability percentage

Firebase

- Firestore for storing lost and found reports
- Firebase Storage for uploaded images
- Firebase Hosting for deploying the prototype

Process flow diagram or Use-case diagram

Process Flow

i. User selects Lost or Found
ii. User enters item description and uploads image
iii. Data is stored in Firebase
iv. Gemini AI interprets and compares descriptions
v. Match probability percentage is generated
vi. Matched item images are shared with users
vii. User verifies match using image enlarge feature

Additional Details/Future Development (if any)

Future Enhancements

i. AI-based image interpretation for better matching
ii. Mobile application support
iii. Notification system for match alerts
iv. Institutional adoption for campuses
